SOFTWARE DEVELOPMENT

Terminal
Atom
Git
HTML5 + CSS3
JavaScript – ES6
React / Redux
React Router
jQuery
Express
Node.js
Agile Development
Responsive Design
UX/UI
WAI/ARIA
TDD
OOP
Testing (Mocha, Chai, Selenium, Enzyme, Jest)

ADDITIONAL

Project Management
Customer Service
Event Planning
Graphic Design
Adobe Photoshop
Adobe Illustrator
Microsoft Office
Data-Center/Workstation Cabling
Data-Center Rack & Stack

PERSONAL INFO

I am a musician that enjoys collaborating, an avid outdoorsman with a passion for fishing, snowboarding, watching or performing live music and spending time with my family.

SUMMARY

After 10 years of working as a traveling musician and a few years working in the telecommunications industry I became a software developer to merge my passion for creativity, technology and problem solving into a sustainable career in a progressive industry. I have an affinity for creating websites and applications that are intuitive, accessible and which make people's lives better. My strong communication and organizational skills make me an enthusiastic and valuable team member.

PROJECTS

GigWrangler

GigWrangler is a React/Redux JS app that allows musicians to connect with music venues across the country. The app utilizing Google Maps API, Google Map Clustering, React-Scroll and tested with Mocha and Enzyme, along with a data-set of over 3200 venues throughout the US. Included is data on each venue that allows users to seamlessly connect with the venue's agent or promoter to book their own shows.

GitHub Repo: <https://github.com/Adamj1232/Gig-Wrangler>

CloudKicker

Responsive weather app built in React JS and tested with Mocha and Enzyme. Employs the Weather Underground API to render fully accessible on demand weather forecasts as well as uses an auto-complete city/state search for smooth UX/UI.

GitHub Repo: <https://github.com/Adamj1232/CloudKicker-WeatherForecast-ReactProject>

Movie Tracker

Built over five days on a team of three members to develop a deeper understanding of Redux and Router as well as become acquainted with a Node.js, PostgreSQL, Express and consuming data from multiple end points. Movie Tracker allows users to create an account, login, browse and save favorite newly released movies.
